MNM Digipro Manager Locked

Posted by dingerling - 2012/01/16 02:38

_____

hello fellow machinists!

I can`t send (sysex/wav) files, found on this very page to the digipro manager. i get the message "DENIED: LOCKED".

What is wrong with me? :silly:

_____

No one? really?

i use a sfx60+ mkii and followed the manual.

normal sysex receive works.

goggle has no answers.

tried Function+YES.

tried it in new snapshot also.

tried receive ORG and one of them slots.

i think it might something trivial but i really have no idea.

 :S

_____

Same for me.

I'm on a new SFX60, got the same message..

Anyone?

Thx

_____

Maybe you're currently in a locked snapshot?

_____

If you do not have access to the DigiPRO Draw machines, you must upload
the waveform presets to the machine. Follow the procedure above but instead
of transferring the OS update, transfer "Elektron_SFX60MKII_waveforms.syx".
PLEASE BACKUP ALL USER DATA VIA SYSEX BEFORE UPGRADING.
BETTER SAFE THAN SORRY.
Please report any bugs you may find to support@elektron.se.
Enjoy!
The Elektron development team

^ maybe thatÂ´s the cure to your problem

i didnÂ´t testdrive the DigiPRODraw as for now, since my mono arrived a month ago and i am busy learning the structure
and the machines.
perhaps youÂ´ve sorted it out by now anyway

_____

Although this post is quite old, i discovered a solution/workaround just yesterday, had this error for a long time too.

At first, restart your monomachine (for real).

Doing it the bad way: open one cyclic waveform in C6, convert it to DigiPro, open up the DigiPro manager in the
Monomachine and select the wave you want to overwrite.

You are now able to upload only one wave. After uploading this wave, all other waves at the Monomachine are locked.
You have then to restart the Machine and upload the second wave and you are locked again. Restart and repeat... and
repeat... quite uncomfortable.

Doing it the better way: @C6: open exactly 64 Waves, convert them to digipro format. @Monomachine: Restart, go to
digipro manager and select "receive > all" (don't select one specific wave).

There you go. All 64 waves are uploaded and available. Before uploading the next bunch of waves you have t restart the
machine again, seems like a huge os bug. But this works fine for me.

Best,
tmk
