OT: Track recorders - clear/reverting to default
Posted by dubathonic - 2011/09/07 11:50

_____

While sampling from an external source, I somehow managed to load one of my saved & normalized samples to the R5 slot, i.e. the one that ordinarily holds Recorder 5.

Now I can't make the R5 slot read "Recorder 5" again. Does anyone know how to make it revert to its default setting? :blush:

Double :blush: if this is in the manual somewhere and I'm overlooking it. Thanks!

hrm, that doesn't seem like something that should be able to happen but you could try Function + Clear with the slot selected. This would normally clear the recorder.

_____

Simply double click the Track and hit Function+clear...

I didn't know you could do this.. I suppose I should get around to reading the manual, lol
I wonder if the extra memory reserved for each of the 8 recorders gets freed up when loading a smaller sample? Could be handy..

Thanks for the help gang...I'll give this a try. I've read the manual a few times, but obviously my retention isn't the greatest ;)
