Quick Octatrack question
Posted by Barfunkel - 2011/10/05 19:02

_____

I couldn't find an answer while quickly checking the manual so here's the question:

When using an external method of recording note data to the Octatrack's sequencer, ie something like an Akai MPD does it record microtiming and velocity?

In other words, if I'm playing a drum groove on an MPD, will it be replayed exactly as I played it, or will the velocities be all the same and will it be quantized?

_____

i don't think velocities will be recorded.

however, you can uncheck quantize in the personalize menu under OS 1.02.
trigs will be placed on the microtiming grid.
