
Feeding your OT with your MD...

Posted by AikiGhost - 2011/10/28 22:52

Just wondering if anyone has done this yet?

Make a MD pattern with a single machine type and PLOCK it 64 different ways, then sample the resultant loop into OT and slice into 64 parts. Giving you a huge bank of MD sounds in a small number of loops which you can change the sounds between easily using LFOs and the OTs slider.

Just a thought. :cheer:

Good tip!

I saw the tip video's with the tip to have several sounds in one samle & using the slice grid. I wondered how this was done. With the MD, it's easy!

there are lot of ways to combine samples :) For example you can use the OP1's Drum Editor software to combine 24 sounds up to 12 seconds :) I can't recommend this enough!
