iPhone App - MIDI Chord Dictionary

Posted by gmcerveny - 2010/06/03 12:45

Hey All,

I created this iPhone app to help me lookup midi note numbers to program my synths. I added a feature to also look up chords and inversions. I found it works pretty well as a reference for programing chords and bass lines into my MD midi out instruments.

Here's a link to the app:

http://itunes.apple.com/us/app/midi-chord-dictionary/id360736515?mt=8

And here are a few codes if anyone wants to check it out:

JJ3JM96MMPLJ
74YTR4EKH936
7JMW46MN94PL
LL6KXWHLHREM

I'd love any feedback.

Thanks!

Just bought your app and would like to share my feedback:

First, it's easy and convenient to use. I like stuff kept simple so thumbs up!

What I missed and this was my original purchase intention was the display of how to program these chords on your MD.

This could be done by one additional column "MD" which told you the incremental values to your base note i.e. +3 -4

Maybe you want to update this some day?

This is going to be by my side ALL THE TIME if I get the Blofeld instead of a MnM MKI this winter...

Thanks my friend! :)

Hello,
I have used your application and i really loved it. Its really the awesome to use this application. Among all the applications that i have used so far this is the most amazing application in ture terms.
I will look forward to some more apps from your side. Can't wait any more.

Looking for information regarding the iPhone:
iPhone Repair and iPod Repair

tHanks Bro'..... I bought it for my iphone, so I don't have to use my mac monitor.... If I want to use it also for the IPAD should I have to buy it again ?!

Many thanks
