## Problem when uploading a file

Posted by Didjeko - 2012/04/20 17:33

---

I tried to upload a pdf in the science labs / octatrack (OT structure overview) and had this error message at step 2 :  
Error uploading - Directory problem. Cannot move file.

---

Half fixed : the name of a document must not contain spaces.  
Nevertheless, after finally uploading it successfully, the document is damaged and cannot be opened.  
The original size is nearly 1 Mo, the uploaded one has only a size of 24 Ko ?:(

I tried to upload my document as a jpg and svg file, and had the same error (directory problem). I removed the file because it is corrupted. So, I give up, since it doesn't seem to interest anybody
