## Machinedrum wobbles!

Posted by makko - 2010/05/17 05:25

---

This thread is dedicated to machinedrum wobbles.  
Post clips and discuss techniques here!

So... it's been a long time that I've used my MD. But today I felt like it! And I have made the filthy robot bass! (will record it tomorrow) :woohoo:

How to (I will update this info tomorrow when I'm home):

Trx-bd2 ->> turn up the pitch to something between 45-65 ->> turn ramp down ->> add some of the second distortion (+-40).

Route the lfo(trig) to the LPF and make it wobbly (lfo depth around 35) ->> turn SRR all the way up ->> now turn on the FiltQ to somewhere near 100.

now use the lfo from another track to finish it: Route the lfo to the HPF but this time use a low lfo depth (17). It's cool to use another lfo speed on this lfo (twice slower than the other one for example) At this point I think you should have the sound going on.

I routed the wobble to back the an input. To cut off some of the highs (annoying srr frequencies) And used EQ to make it a bit nicer.

I started off with this monster and now I'm curious to know what you guys come up with! :)

Sounds like a cool technique. Thanks for sharing! :)

My MD literally wobbles, I think I'm missing a rubber foot...

I'm with ya on this patch except for the LPF and HPF routing for the LFOs. Maybe I'm missing something but there aren't any LPF or HPF parameters on the TRX B2. Do you mean FLTF or FLTW?

Otherwise pretty slick. I'm leaving off the wobble and having it work more like a formant. Thanks for posting.

You can pretty much assume the FLTW and FLTF are the filters he's talking about... I think.

Maybe it's not as cool as i thought yesterday but ive uploaded it anyway :laugh:

mp3: <http://www.zshare.net/audio/76206864fcf56dd0/>  
sysex: <http://www.zshare.net/download/76206922b2499ccc/>

Im sure you guys can get it a lot cleaner, I have been fiddling around too much with it I guess.

This is some stuff I made like one year ago but its full of md wobbles:  
<http://soundcloud.com/the-glitchhiker/makko-the-unperformed-dubstep-liveset>

If you hear something interesting in there, I can try to find the sysex for you :)

edit; ive made another one! this one is wierd:  
<http://www.zshare.net/download/76209545c9bdb48d/>  
the rar contains a small mp3 and sysex file! Enjoy! :)

Hey Drummers!

This is something special for me: Its my first post in this forum. Its my first day with my machinedrum. Its my first piece of hardware in music-making.

I read this thread yesterday, after my machinedrum was unpacked of its nice little box. Don't know where to start, I tried to do a dubsteppy-type of music. And this is what came out of it after just a couple of hours... far away from perfect (especially because my Main-PC broke down an I have to record this directly out of the MD into my crappy onboard Laptop-Soundcard) but good enough for me right now to share it with you. All Sounds from the MD.

Love the Machinedrum already.

Have a Listen:
