8-Bit Sounds From GND-IMP
Posted by Gzabriel - 2008/11/17 13:40

_____

Hey I don't know if you guys know this trick but if you max out all of the first page parameters on the GND-IMP and then set AMD to full and play with AMF as well as setting the DIST and SRR to full you get a pretty nice 8 bit synth sound.

_____

Subtle changes to the AMF and SRR parameters yield many cool sounds. A little bit of filter on the right sound can get a nice feed back/ground loop type of sound.

_____

AMF will affect the pitch. By using LFO on it or other parameters this sound can get interesting, like fucked up FC tone!

Thanks for sharing the tip!

/M.Q.
