
TM 1 meets Virus C

Posted by Synthetique - 2013/04/21 08:52

Hi guys, is possible to send midi files using TM 1 and C6 to upload OSs and Libraries to Access Virus C?

I've tried but it only sends SYX files and OSs and a lot of Libraries are in .mid files.

On Virus manual they suggest to use a sequencer (as Cubase) and midi cable; but I don't have any DAW...

Can you help me?

Thanks Guys

I can't remember trying c6. I use something called sysex librarian. This is Mac only though. There must be something similar for pc.

I found MidiOX, I've update the OS of Virus, but I cannot upload Libraries..

Anyway, now I have another 4 Banks, for a total of 1016 patches, I think it is enough..=)

I used to use C6 all the time for doing sysex back ups from my TI2, always worked just fine. The other apps work too, I just like the simplicity of C6 for stuff like this.

The problem is loading .mid, not .syx.. =)
