\"Threat Was Blocked!\" (HTML/Framer bug on site)

Posted by RubixGroove - 2013/05/07 09:04

_____

Hey Elektronauts,

AVG keeps warning me of an "HTML/Framer" bug/virus on the site. This is new to me, first time I've seen it pop up. I used this same machine to access the forums last night and didn't get any sort of warning.

Maybe this is already known about but figured I might as well say something.

Peace!

_____

Most probably a false positive. Read the comments further down in your AVG link, and search for "false positive" and "I'm ready to uninstall AVG".

Kaspersky tells me this site is OK! Elvis too!!
