## Korg Volcas Mangled by Octatrack Video

Posted by dataline - 2013/07/08 17:13

---

<http://youtu.be/okdZFgxFxjQ>

Here it is :) More details in the video description!

Part 1 uses THRU machines and Part 2 uses Flex Buffers.

There are One Shot trigs in the Recorder tracks. By pressing YES I can capture the loop playing, then switch to Part 2 and start mangling that audio :)

:evil:

That's some PRO mangling right there! Nice!

The Volca Bass actually sounds really nice. If I didn't have an Anurshi i'd be all over it.

I'm still waiting for a good demo of Volca Keys- haven't been impressed thus far. It seems like it has the potential to be more impressive, given the specs, but I just haven't seen it yet.

the Anushri eats the complete volca range for breakfast sonically speaking...you're lucky you got it instead.
