## Minitaur + \Fooger + Octatrack = i just crapped my pants

So, I was hoping to be able to run sound out of my newly acquired Minitaur (great little synth, very controllable via the sequencing capabilities of the OT , sounds good.) and into the Freqbox and then back into the Minitaur through its filter. I am sure this would sound awesome. But I can't do it. So went Minitaur > Freqbox > OT input. Wow, with the right filter settings....what a crunch bottom end you can coax out. Delicious.
