
Science Lab #...

Posted by Nils - 2007/11/09 23:09

I figured I'd take a break from speculating on new Elektron machines and make some music on my soon-to-be OBSOLETE and OLD Elektron gear 8-) So I'm wondering, when are the next MD and MnM science labs due?

I suppose we could count the tribute to Daniel some sort of Lab...still, I'm always ready for the next challenge!

Actuel; do it when you find the time, not before. It's no hurry.

Hail the almighty Actuel!

Thanks for a challenging theme. I remember the track in question, I think it was done with one EFM sound only (can't remember which), and Joe crushed the competition with it.

And thanks for the generous time limit, it's needed :-) I will try to contribute in both the MD and MnM category this time.

Nils

I'm also glad for the late deadline because I probably won't get my UW back from Elektron for a week or two. Can't wait to be the first person with the UW MkII, and all unbeknownst to me until I open the box! 8-)

hahah. well, last time a lot of folks asked for an extension. so hopefully the extra will help. to be honest, i almost made it January 30th. i think this one will be harder for people. i mean, first there's really no limit, and also you're dealing with sorting through someone else work. truly a challenge imo.

hooray!

i agree though, that these are going to be far more challenging than the other labs so far. especially since joe is good at melodies and some of us. . . aren't. ;-)

maybe i'll even participate in the mm category(!).

M

Ohh... yeah, I just listened to the mp3. Very nice indeed. I wish it was longer.

Just reminding everyone about the new Science Labs that are up. So whether your waiting for a new MKII's, caressing your "classic" machine and letting her know she's still your sweet baby, or something wholly different, get on those REMIX's people! :-D
