
Testing compact flash cards?

Posted by de Haan - 2013/07/23 08:40

Hey guys,

I am having problems with my MPC 1000 sometimes deleting some of my samples when doing an "save entire memory". I can't figure out why this is happening, so I thought that maybe my compact flash card is corrupt. Is there a way to test your compact flash cards? Preferably on a Mac...

Cheers,
Nikolaj de Haan

Use this software (or something like it):

<http://www.freedownloadmanager.org/download/cf-card-test-software-mac-2888810.html>

If you're recovering your lost files with it then your CF card is either corrupt or it needs to be reformatted.
