
Small stereo distortion unit?

Posted by de Haan - 2013/08/07 23:45

Hi there,

I'm looking for a small hardware stereo distortion unit. I've been searching a lot, and so far Proco DeuceTone Rat is the only one I've found. It's pretty expensive and more like two mono distortions, so an alternative would be sweet. Can you guys recommend something? :)

Cheers,
Nikolaj

How good are you with a solder-iron ??

there is this dutch forum, where they had a lengthy thread about making a cheap, but very usefull distortion-unit.. I bet if you made 2 of those, and replace the pots with stereo-pots you get a reasonably cheap, but very cool distortion unit..

I burned my hands to much, trying to make it.. else i would have had sound-examples of my own..

google for "too many knobs" distortion unit. here is a result i found for ya..

Nord micromodular would be my first choice. You can rig up tons of amazing distortion patches in it, and then hey guess what it's also a synth.

Also this thing, I guess? <http://line6.com/m5/>
