
A4 & Electribe Es-1 Noise thing- video of hands and machines

Posted by spbaker - 2013/08/22 21:23

<http://vimeo.com/72796792>

I was jonesing for an Octatrack and the wise old man said "use what you have". The Es1 was the first big piece of kit I bought back in 1998 or thereabouts and still have it, so dragged it out and put some new samples on it and midi'ed to the A4, ran it's audio thru the A4's inputs. Vox thru the ES1, two voices of the A4 are processing the sampler, mainly using the filter overdrive and a bit of AM1 & 2.

The other two voices are a "bass" (for want of a better word) and a pad. The video edits are to keep it short, it was 12 mins :P
