OT Mopho X4 setup PLEASE HELP

Posted by ttaralli - 2013/08/29 00:19
_____

Hey guys,

I'm having a hard time setting up my Mopho with the octatrack. Main issue is that I can't get the Octatrack to receive/record the notes I'm playing on the MoPho keyboard.
I can do the following
- record mopho using the chromatic mode of the OT
- Manually enter notes on the OT
- The OT will send note info to the OT
- If in Project/Midi/Control panel I check "Audio not in" I can hear the mopho and also hear it sending midi to the audio tracks I have setup. I mention this because now I know that the midi cable is working and the OT seems to accept some midi data.

For some reason no matter what I try, when I play midi notes on the Mopho the OT does not want to record them.

Please tell me what I'm doing wrong.

THANKS!!!!! :)

_____

Might be something to do with the OT's Auto Midi Channel.

_____

Do you have an autochannel configured in the OT? That midi channel must be the same as the mopho's midi channel. Then you can send notes to whatever track you selected. Disable all the other channels for audio tracks for testing purposes.

_____

Check your MIDI channels

OT Audio Tracks use Channels 1-8 by default for Trig Chan. You can't have your MIDI mode/track channels the same.
