## WTB Kawai XD-5 (US)

Posted by onanonanon - 2013/08/30 05:02

---

Hey,

Just thought I'd check here, because I've had nothing but pleasant experiences buying from this community so far. I'm looking for a cheapo drum synth to go with my MnM MKI. I'm open to other gear, but I've got my eye on the XD-5 as it seems quite versatile and strange. Then I'm probably going to blow the rest of my cash on an Eventide Space or something similar.

=====

I got one recently. Been getting great results programming single patches and making use of the MNM's arp to get some really unique sounds. There's one on eBay now with no bids...
