## MOOG Minitaur users... need help/input

Posted by marcel videla - 2013/09/04 02:39

---

Last night, I plugged patch cables into my NateFrogg's FutureRetro XS from my A4 and had no problems sequencing it.

When I did the same from A4 to MT, I get NOTHING.

any Minitaur owners have issues sequencing it via CV/GATE from A4?

any input here would be helpful.

I have no problems with controlling the Minitaur using A4 its really magic.

However, I still use midi to control the notes of the Minitaur.

I only use the CV values mainly to wobble the frequency/resonance/envelope/etc..

Go to the Moog Minitaur/Taurus forum and download the latest firmware version 2.0.10

There is also a short description from a forum member on how to send CV from the A4 somewhere here on this site....
