OT - Track Recorder Flex Machine not stopping?
Posted by Falloutsoldier - 2013/09/04 02:09
_____

Hi There

when I record manually by pressing Track & Record A-B

I get a loop in my flex machine track, which I can manipulate which is all good

but then when I press Function + Clear to clear my patterns, all the flex machines just keep playing and dont stop until I press the stop button?

how can I make them just stop when I clear the pattern / triggers

my loops are 16 steps long, so I want them to just stop when the 16 steps finishes and all the triggers are cleared

really doing my head in!!

any help would be greatly appreciated

thanks!!

_____

turn off looping and/or adjust the amp envelope to cut at 16 steps

_____

What Rhizome said. You can also press Function+Record AB and select loop:off, that way all new recordings will automatically have their looping disabled.
