# Deleting all your Tweaks
Posted by Falloutsoldier - 2013/09/04 06:37

_____

Hi guysh

so say when you have a little loop going and you start tweaking your parameters

get stuff really warped an that

I swear there is a way to resent all the tweaks to their original state so your pattern plays as it did before you started tweaking

Ive fully forgotten what it is though!

while we at it, how do I actually clear a parameter tweak?

sorry dont have a manual handy with me right now!!

appreciate your help!

_____

First you need to save the part from the part menu. Func-part, func-edit.

Tweak away.

Recall time? Func-cue. Boom shakalaka.

Edit: oh, already been answered in another thread. Remember though that this won't recall trigs tho their earlier state.
