
More new MDUW music

Posted by encym - 2013/08/22 01:49

Hi All,

Finished yet another new track, just MDUW, loaded with samples obviously.

Check it out --- as always, comments/critique/praise much appreciated!

Nice and chunky, but with a stripped-down feel â€“ very nice! Makes me want to try an MD-only track too . . .

Really cool, trippy track dude:) Quite lush sounds for such an efficient setup.

@ Duplex... definitely try an MD only track, they can be a lot of fun. If your doing a live set, it's always cool to break into something different for a short while. Sort of like Jeff Mills ending of his set with a 909 solo.

Thanks a lot.

This I think is my favourite of all the MD-only pieces I've done so far.

I am continuing to work on this concept for a while to see what I can coax out of this machine.

As always, guitars and other audio material is transferred to the MD after having been recorded and treated in Logic or Live, so I don't usually use RAM machines - even though that may be next on my list of things to tackle.

Thanks for listening!

Great track. This kind of thing makes me realize I've never even scratched the surface on mine.

Out of curiosity - how many patterns does this comprise? Just curious how people are structuring songs with this much variation - I've realized lately I'm too much in the pocket on patterns on my Elektron gear and when I listen to something like this I think I should be introducing more variation.

Hi Victor Star,

Thanks a lot.

To answer your question: Those were about 13 patterns all in all I think.

I think one should get much brave with regards to patterns,

More can go wrong this way, but errors are probably more important than safety.

You could just start by pressing record on a blank 64-step pattern, or why not try 57 steps.
Then add the sounds.

It would make for astonishing results I'm sure even though it might get a tiny bit nerve-wrecking when done live in front of an audience.
