
Octatrack soundpacks on MD?

Posted by waffl - 2013/09/09 21:16

Hi,
I know for some of the longer loops/samples etc, it doesn't make sense, but something like the Tape 808/909 goldbaby samples should work fine on the Machinedrum correct?

Is there any difference between the Octatrack 808+909 soundpacks vs. buying directly from goldbaby? (other than the organization into octatrack sets etc?)

=====

The MDUW has 2.5Mb of memory, so you'll have to pick your samples. It holds 48 samples though so you can get a good selection. I have mine full of goldbaby, driven machine drums and a few random samples.

No point buying the octapack if you're not using an octatrack.

Edit, if you have a plus drive, you can hold all the above, 128 times over.
