Set up octatrack as Hardware FX

Posted by Human_Nature - 2013/09/08 23:14

I had this sorted but had a weird problem where even after clearing all scenes the crossfader would modulate the delay, such is life with the octatrack !

Anyway some one posted a good tutorial vid of how to set this up and now i can't find it, coul dsomeone hook me up, it wasn't the record trigs ones from Electron or Tarekith

You can set the delay up without the dry signal which is nice for external processing.

Press FUNCTION + EFFECT to take you into EFFECT set-up menu and turn DIR to zero.

The fun begins when you set up LFO's to modulate the delay time and feedback ;)

If you want to put reverb on the delay this is where the neighbour tracks come in handy for extra processing.
