I hope that the sysex will work.

Some of you guys have asked for a dub thing from me, and here it is. Feel free to mess around with it and make your own interpretation.

Track by track:

1. Sine bass
2. Chord
3. Chord
4. Chord
5. Noise
6. Reverb

The sysex contains kit+pattern.

Here is an example of how the sysex file can sound when playing around with the track: [http://c64.org/~jgb/jgb-enter\\_sandbox.mp3](http://c64.org/~jgb/jgb-enter_sandbox.mp3)

well the kit itself came through but the pattern did not, maybe I did something wrong. I did get a error message when sending. I did try multiple times.

Hmm... anyone else that has the same problem? When I looked at the file in C6 it said that it contains one kit and one pattern.

I guess it's MnM material, right?  
MD user here, but I was wondering what kind of MnM synths you used for those chords sounds....

Appreciated so much!but can't load the file:  
on screen i got:  
1MSG 1 ERR  
nothing loaded...  
used: osx 10.4.11  
elektron c6  
and you?

What hardware/software are using? maybe is a software issue since someone use MIDIOX-PC other MACOS-C6...

Updated the file. This time I verified the file by sending it back to the MM, which accepted it and played the pattern correctly.

[http://elektron-users.com/index.php?option=com\\_docman&task=doc\\_download&gid=410&Itemid=30](http://elektron-users.com/index.php?option=com_docman&task=doc_download&gid=410&Itemid=30) is probably the same location as before, but there it is. If this does not work I have no clue what to do to make it work.

I used Elektron's C6 application on Win XP SP2 with the TM-1 interface.

Now it's ok even if i get  
3MSG 1ERR  
still i can get the kit and the pattern...  
weird but it works.  
thank you jahbless

Are there any known incompatibilites between OS versions? I am using the 1.10 that my MM mkII was delivered with. If needed I will upgrade to a newer version and do another dump.

Well I thought 1.10 was the newest version. I am fairly certain that my MNM is on 1.08 which may be the issue. I will try upgrading the OS if the transfer doesnt work.

IMHO

I guess it's not an OS issue...but mainly a buggy C6...

better use MIDI-OX for those who run WinXP...

peace

I have a sketch i did with the kit. The drums suck really bad at this point, having a baby leaves me with almost no time and rushing things. Ill post a link here in a second.

ok its

<http://members.cox.net/ogf/test.mp3>

machine drum

mono

kaoss pad....the stuff run through this is only on one speaker for some reason.
