## Question on a song mode. How to play alive in a song mode?

Posted by maxrobo - 2008/06/03 14:48

---

Please answer, as in a song mode to lose songs during live execution without a stop and without pauses. Thanks:(

If Im reading right theres two ways I know of to avoid stopping and loading silences-

1 create really long songs in song mode (eg 4 songs in one song mode chain) or...

2 load songs when allowing delay feedback to roll in mute mode: it will only fade when you reactivate the track.

yes - long song works!

usually i loop a pattern or several paterns with right tempo and mutes

then i jump manually to next "loop" of other paterns in the same song. sometimes even in "edit" mode because of "longer" window.

hmmm....

I regret. A mode of a song very good. A convenient mode. Why there is no opportunity to use it up to the end. The delay of a sound means only will solve a problem. Then most to switch a song and still, certainly, long songs. And it is possible to copy a song entirely and to place in other song or only patterns to type. Forgive for English I from Russia and language yet I do not know in perfection, I write through the translator. =))

if you have very complicate SONG with lot of paterns, ofsets, tempo changes etc it is not good idea to merge that song with another one. lets make a pause for applaud... :)

but if you like live improvisation with paterns or patern - you easy could make a "long song" with lot of songs included

Probably indeed. Thanks. A problem that I play an alive techno and people come to dance, and the pause between songs can spoil it mood. =)

I used to rely on this quite a bit back when I didn't have a smooth way to transitioning between tracks :)

Simply there are no words =) Forgive for a mistake in the coding! I Hope in general that in the new version of system the mode of a song will be expanded and we can use it completely!

And how to copy in a mode a song? How to copy contents of one song in another and by that to make a long song? It is necessary to do it in parts or there is an opportunity to copy entirely. Forgive if a question silly! But to be better five seconds the fool, than to remain it all life =):side:

This...thread...is...AWESOME.

Maxrobo if someone made a movie of you and you spoke english just like that I would watch it. "Robo" in your name and "Russia" reminded me of this guy...

Youtube - Russian Robot

I wish song mode could mix. That would be a great tool for live performance dj'ing. Playing your tracks live yet mixing them together. Sort of how Soulwax/Nite Versions plays live and continuous mix-like.
