_____

Here's a page that shows the frequencies (and notes) provided by the TRX and EFM machines:
http://www.gweep.net/~shifty/machinedrum/

isn't there some sort of VST plug or something that is able to give the pitch of any incoming audio?

that would be super useful...does such a thing exist?

i'm mostly a drummer...it'd be amazing to open up a sequencer with such a plug, and tune drums with it!

This printout it sweet! I'm going to laminate it and post it next to my MD and start crafting some sweet TRX base lines!

cchocjr

Thanks for the pointer. I'd come accross this page before, but it didn't mean anything to me at the time.

If you got mac there are a few pitch recognition softwares. I like the strobe tuner myself. But you need a long enough sound for it to work. I'm not sure about PC softwares.

Hidetomo Katsurea Strobe Tuner

damn, i'm on PC...thanks for the suggestion anyway.
i know of something called Ctuner but i don't think it works like i want it...

_____

sweet - I have been looking for a strobe tuner for my analogs for some time!

I usually just tune the MD by ear, and to be honest, a numerical frequency chart does not do much for me - ear is fastest, or conversion to like A2, or C3 or something is best.

It would be really cool, if MD had a small pointer or letter in pitch frame to show when it's tuned on some note. What I actually mean is that the frequency table would be coded inside MD OS and the GUI would show whenever the pitch is on note (or as near as it gets). The UW allreaydy has tuneable machines, so this step would next logical one. I love how MD is growing from the both sides - users and designers of the machine.

yeah, I see that.

I agree, it would be nice to have a pitched mode like the Jomox Airbase has (I think it has that...) where turing would move the tuning stepwise.

_____

^^^Cool -- that would be good, 'specially if the note was indicated (as opposed to just a number), which I guess is what you were getting at all along!

==

Re: how to knw the note on MD?

_____

well, if it were in half steps, I would not really need a letter - a number is fine. However, half steps and a letter would be the best - get ready for some serious DnB out of the MD if thats in the next OS upgrade!

Very cool concept. Let's hope elektron sees this too. I could imagine funtion + pitch knob turn and the numbers would turn into quantized noteindication. Release funtion and it would be numbers again. Too bad the funcion + pitch knob is allready taken by global pitch adjustment (which is cool also). Can anyone figure out any other clever way to do this.

God bless unemployment!

seriously, I need to spend less time trolling these forums, and more time making music. However, this and the other forums are a nice place to regroup while I think of ideas :-D

_____

hahaha I cant believe you actually changed it to that!

yeah, I will let you know - but its doubtful - I am happy with just 2, and I have no use for a sidstation since I have the midibox and the emulator on the mono.

Elektron - time to make a guitar processor! Thats my next purchase...
