using machinedrum and sp-303. this set fit well at the knitting factory, but wouldn't at a club.

thanks guys! i appreciate it because it was a different mode of working for me--i tried to bring together a lot of different musical things i enjoy doing, sound design-y things being one of them.

no one was dancing, but it was a rock club (albeit one open to weirder things) so i didn't expect it. i could have brought the more danceable beats, but decided on a different route that in the end went better with the other billed bands that night. it was the first time that people whom i did not know congratulated me afterwards! a nice affirmation to have.

<http://scutopus.com/music.html> has more mp3s for comparison/perusal/enjoyment, including some that folks can actually dance to!
