
Road Agent (demo)

Posted by milkmansnd - 2005/07/15 03:23

check the downloads section - a little treat the monomachine fairy left tonight :P

I was just playing with this and had to record it - I was having fun with some deadwood samples I just ripped - man I love that show!!!

heh, on second listen - this track sounds like a complete mess. There are like 3 mistakes I can hear - however, you get the general idea :-o

yo i enjoyed it Milkman! the fidelity is rough but whatev...

i wouldn't trip on 'mistakes', typically only the artist making it or cynic waiting to find fault hears that.

keep it up (making tracks that is) :-D

peace
actuel

(where's my NES sounds doggie?)

yeah - the whole set I am doing is gonna be on the crunchy side - thats because every box I am using is spewing out through their stereo outputs, cause I wanna use this little behringer board. Sometime soon I will multitrack and edit the whole set so that I can hand out some CD's. Maybe over the weekend...

My NES and all of that shit is in a storage unit - maybe I'll dig it out sometime this summer. That NES soundset never got sampled - for me either! We need it in the downloads section!

Anyway - this is the rig:

Intense! At 1:09 are you using transpose, or is your pattern already like that?

=====

Re: Road Agent (demo)

Posted by milkmansnd - 2005/07/15 15:50

transposed it - good ear! I just copied the pattern to a new slot, and bumped it up 3 steps.

Pardon my ignorance, but what's the device on the far right?

thats the x0xb0x - its a DIY 303 clone that I built from a kit! It sounds awesome - and is the perfect size for the rig!
