---

hey elektron friends....

just finished my new homepage. [www.juno6.de](http://www.juno6.de)

in the download section you find some music free to download!

<http://www.juno6.de/download/download.htm>

all tracks are created with md/uw + mono. (a few + sid and jp8000)

all tracks were live recorded on a mp3 jukebox with a simple 8 channel analog mixer and no special fx.

for the monomode tracks, i only used my mono of course ;) , you know why? md was sent away for upgrading to uw, yeah.

for the fireflight tracks i used the uw, mhhh...."lecker"

so have fun ... :)

stef

cool - welcome aboard!

I am listening to some of this stuff right now - very good! Sounds spectacular - what other gear are you using to make the recordings?

thanks... :)

as i said, i plug the audio outputs in a 8 channel mixer.

1x stereo md/uw

1x stereo mnm

2x mono jp8000

1x mono sid

1x mnm headphone out to md/uw input b for resampling

1x mic md input a

then the mixer stereo sum into line in of the mp3jukebox (iriver ihp)

yes, and then just recording everything as a wave file on the jukebox.

after that copy the audiofile via usb to pc

and finally i use wavelab 5 and waves to cut the file, process it with a compressor plugin and the l1 ultra maximizer.

fertig! (ready!)

very simple, but effective. 8-)

l1 ultra maximizer.

ah ha, thats what it is.

---

Glad to see another person primarily recording stereo! For me its more fun to play the material live into my DAW and then edit it in Live as a stereo file.
