## control of md by bitstream

Posted by frenchman - 2009/07/18 03:32

---

Hello, I would like to control the md sps1 with a bitstream pro, how can it be done? thank you  
excuse my English  
I am French or cheese which stinks:P

I've also bought the Bitstream controller to use with my machine drum. If anybody can help with setting it right let me know. I'll start looking into that better real soon and if I find a way to do this I'll post it here.

Anybody using the Bitstream 3x

I bought a bitstream controller a while back and began programming it. You need to refer to the manual to get the sysex code to program it. There are specific codes for control parameters. I had the huge board with a ton of knobs.

Guys it's not that hard and worth finding out yourselves so you can get it to your own spec and apply it to other things:

Find the manual for the Bitstream, find out how to assign the Midi CCs to the controls.

Find the manual for the MnM or MD, look in the back to find out which CCs relate to the things you want to control.

Refer between the two, test, repeat until it works.

Hi,

I'd like to have the controller, too. I have a question about the lfos and appregios:  
is it possible to trigger any parameter with them or are the appregios just used for notes, not for ccs.

regards

I have a bitstream lying around, never actually figured out how to work the LFOs, ARPs etc.

Maybe the ministry maybe able to assist.
